ABOUT THE TEACHER

One astronomer teaches every lesson

Dark Sky Field School is taught by one astronomer, who also runs public star parties for the Flagstaff community. That same teaching happens here: finding your way across the sky with your eyes, then binoculars, then a first telescope. Flagstaff is the world's first International Dark Sky City, and its skies are some of the darkest in North America. Every course is built from nights spent right under that sky, so what you learn online works the moment you step outside.

FAQ

Questions before you start

Do I need a telescope to start?

No. You start with night-sky navigation using just your eyes, then move on to binoculars before your first telescope.

What level of experience do I need?

None. The courses begin with simple sky navigation and build step by step toward binocular astronomy and first telescopes.

How are the courses taught?

Dark Sky Field School teaches entirely online, so you can learn from wherever you are.

HOW IT WORKS

How to get started

Three steps between you and your first night finding your way by the stars.

01 **Choose a course**
Browse the courses on night-sky navigation, binocular astronomy and first telescopes.

02 **Enroll online**
Sign up any time - the school is open online, day or night.

03 **Learn at your pace**
Work through each course on your own timeline, from wherever you are.
