HOME ELECTRICAL · AUCKLAND

Power your home for what's next

EV chargers, switchboards and safety, done by registered electricians.

Brightline Electrical

FROM SAM

Twenty years of tidy work

When I started Brightline, I wanted to be the electrician I'd want in my own home: on time, straight about the price, and gone without leaving a mess.

Auckland homes are changing. Cars plug in, roofs make power, and boards built in the 1980s are asked to carry twice the load. This booklet sets out how we help, what it costs, and what you can expect from us.

Sam Rawiri

Owner and registered electrician

01

EV chargers

Charge at home overnight, ready every morning.

HOW AN INSTALL WORKS

From first call to first charge

1

A free site check

We look at your board, your driveway and where the cable will run, and tell you if anything needs upgrading first.

2

A fixed price

You get one price in writing. No surprises on the day.

3

Installed in a day

Most chargers are fitted and tested in a single visit.

4

Certified and shown

We leave a Certificate of Compliance and show you how to schedule off-peak charging.

Charger packages

Every package includes the site check, installation and certificate.

Standard
$1,690

- ✓ 7 kW smart charger
- ✓ Up to 10 m of cable
- ✓ Certificate of Compliance

Solar-ready
$2,290

- ✓ Zappi charger that uses your solar
- ✓ Up to 15 m of cable
- ✓ App set-up on the day

Two cars
$3,450

- ✓ Two 7 kW chargers
- ✓ Load management
- ✓ Switchboard check included

“

They found the old board was a fire risk before anything else. Fixed it, fitted the charger, and the car's been charging every night since.

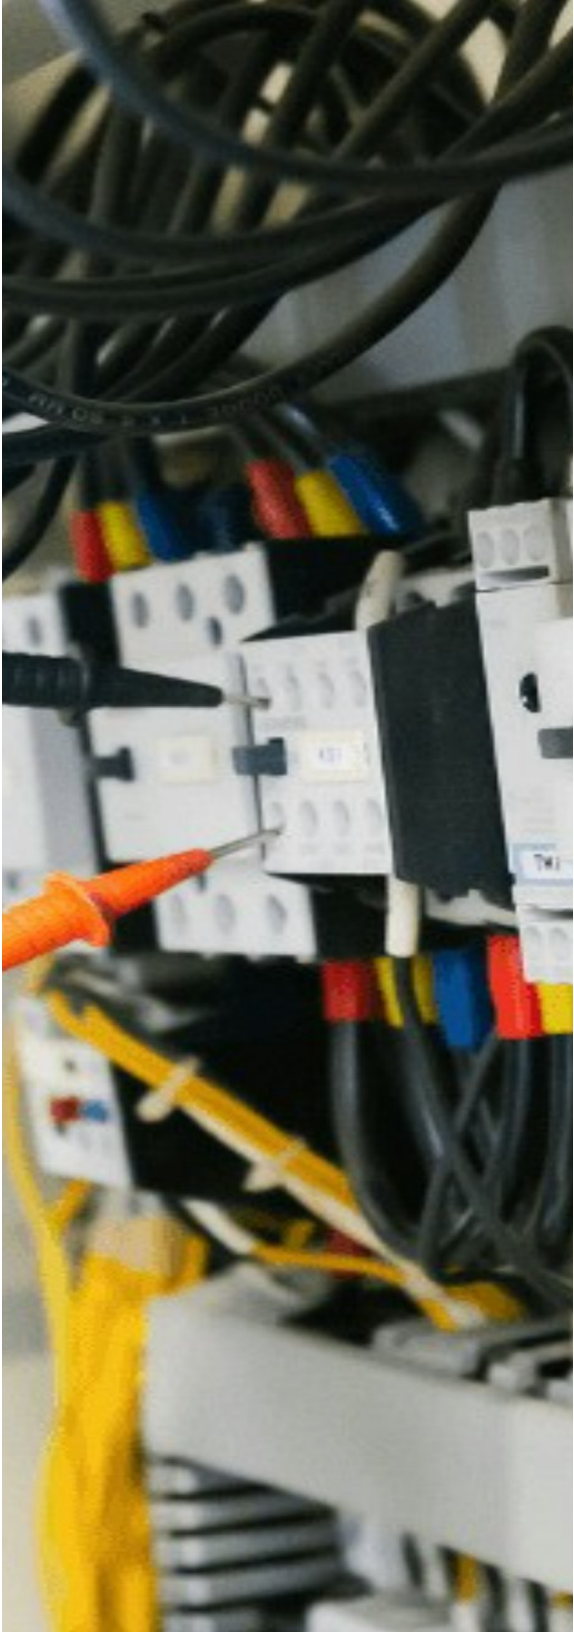

Mere T., Point Chevalier

02

Switchboards and safety

The heart of your home's wiring, brought up to date.

Why old boards hold you back

Most Auckland homes built before 2000 were wired for a different life.

Ceramic fuses were never designed for heat pumps, induction cooktops and a car charging overnight. When a board is overloaded it trips, or worse, it doesn't.

A modern board gives every circuit its own RCD protection, so a fault cuts the power in milliseconds instead of starting a fire.

> A modern board cuts a fault in milliseconds.

We label every circuit, leave space for what you'll add next, and certify the work the same day. Most upgrades take a single day, with the power off for a few hours.

Brightline in numbers

1,200+
homes rewired, upgraded or charged up

98%

10 yr
workmanship guarantee on every job

We're a small team on purpose: the person who quotes your job is the person who does it. That's why our numbers look the way they do.

Questions we're asked

CHARGERS

Do I need a new switchboard?

Not always. We check on the free visit and only recommend it if your board can't carry the load safely.

PRICE

Is the price fixed?

Yes. The price we write down is the price you pay, unless you ask us to add something.

TIME

How long will the power be off?

Usually two to four hours for a board upgrade, and under an hour for a charger.

SOLAR

Can my charger use my solar?

Yes, with a solar-aware charger like Zappi. We set it up so the car fills from the sun first.

Every job finishes with a test, a certificate and a tidy site.

Book a free check

Tell us what you're planning: a charger, a new board, a renovation. We'll come and look, tell you straight what it needs, and give you a fixed price before we start.
